

Teaching Statement

As an educator, I believe that learning should be fun. I remember taking Maths lessons in tears. I was always punished by my teacher when ever I failed to solve a problem correctly, and that experince ruined my interest towards mathematics. Today, I turn away whenever maths is mentioned. Who is to be blamed, me or my teacher? your guess is as good as mine. In my cause of teaching for few years now, I have deviced different fun-learning situations to enable me and my students learn with ease. Tackling the “difficult” topics or subjects, using our day to day activity technique is a good way to start.

Using analogies that we are conversant with, aids learning and better assimilation.

I always aim to foster student-teacher cordial relation so as to break every barrier of differences, thereby making me approachable by the students.

Because I believe in raising leaders of tomorrow, I aim at teaching them how to really be good leaders by my examples.
